

#### CARE TIPS FOR YOUR NEW MOTH ORCHID:

##### 1. Lighting

Indirect light: Place your moth orchid in an east facing window, or shaded south or west window.

##### 2. Watering

Water thoroughly and let it become almost dry before watering again. Avoid using distilled or softened water.

##### 3. Humidity + Temperature

Humidity should be between 50 and 80%. If necessary, set your orchid in a tray of pebbles with a shallow amount of water to help increase humidity. Temperatures should be between 70-80°F during the day, and drop no lower than 60°F at night.

##### 4. Fertilization

If your moth orchid is in bark potting mix, use a high-nitrogen fertilizer twice a month. For all other potting media, use a balanced fertilizer at half strength once a week.

Happy Mother's Day!
